

The new voice for health and safety

Audio signs are interactive 'talking' signs which use visual information and sound to deliver your messages more effectively. Now we're talking...

Audio signs are the innovative solution to tackle the issue of sign blindness and to improve safety, health and environmental outcomes in the workplace and public spaces. Audio signs reinforce the text and graphical information used on conventional signs. When sound **and** visual information are used together, a sign becomes **six times more effective** than one only using visual information.

Features

Audio signs deliver a spoken message or a warning alarm sound when people approach. They deliver clear and concise warning messages in dark conditions or when lighting is very poor.

Automatic operation

Audio signs automatically sense when a person is nearby and only play their messages when someone is within range. The signs continue to deliver their sound messages in dark conditions.

Simple to use

Ease of use was priority during development. Simply turn on, set high or low volume and let your Audio Sign do the rest. It couldn't be easier.

Simple to install

Battery powered, no wiring required. No special tools needed when installing. Mains power capability for use in the busiest locations.

Performance

Signs which use additional talking messages are six times more effective than conventional safety signs that only use 'text and graphics' visual information.

Versatility

An audio sign can be used to play a single message in multiple languages or to play a variety of different sound messages.

NFC (optional)

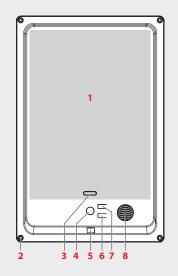

Near Field Communication. This advanced contactless technology enables an audio sign to communicate a wealth of additional information via a smartphone's display.

Easy installation

Audio signs are unique sign boards for displaying visual sign information accompanied by pre-recorded audible sound messages. Audio signs have many applications including health and safety warnings including covid-19 restrictions, visitor information and directional help.

Audio signs are generally wall mounted, but can be used free-standing on a stable surface or fixed to a ceiling if required. They can be installed with basic hand tools. A cable/pipe finder, a cordless drill with bits and a screwdriver to match your choice of wall-fixings are all that should be necessary.

An outdoor weatherproof version is also available.

- Sign fixing area
- 2 Mounting hole (x4)
- 3 Rubber cover (over power/volume switch)
- 4 PIR sensor
- 5 Micro-USB power inlet
- 6 Mode change button
- **7** File change button
- 8 Speaker grille

Sign dimensions: 387mm high 253mm wide 33mm deep

Applications

Mandatory instructions, hazard warnings, prohibition notices and information signs are vital tools in the Safety, Health and Environmental industries.

Audio signs communicate SHE messages more effectively than conventional signs and improve awareness. The benefits of audible signs are also significant outside the SHE industry sector; applications include messages for the visually impaired, manufacturing instructions, security signs, public information notices, exhibition displays, sales & marketing media. The limit is your imagination.

We can supply signs with standard health, safety and environmental messages but we also specialise in producing bespoke signs which can directly target any hazard. Signs can be branded with your company logo or imagery. Audio signs are ideal for raising awreness regarding the risks associated with the Covid pandemic. Get in touch and let us know what you need.
